USE AS DIRECTED BY A DOCTOR

Directions for Preparation and Use

Your baby's health depends on carefully following these directions. Proper hygiene, handling and storage are important when preparing infant formula. Failure to follow these directions could result in severe harm. Ask your baby's doctor if you need to use cooled, boiled water for mixing and if you need to boil (sterilize) nipple and ring before use.

1 Wash your hands, surfaces and utensils

2 Add 1 unpacked level scoop (8.8 g) to each 2 fl oz of water

3 Cap bottle; shake well; attach nipple

1 Can

15 Bottles

When mixed as directed, makes approx. 90 fl oz of formula.

Storage

Once mixed, store bottles in refrigerator and feed to baby within 24 hours. Close opened can and store in a cool, dry area (not in refrigerator). Use opened can contents within 1 month.

Warning

Powdered infant formulas are not sterile and should not be fed to premature infants or infants who might have immune problems unless directed and supervised by your baby's doctor. Never use a microwave to warm formula. Serious burns can result.

Mixing Guide

Measure water + Add scoop(s) of unpacked level powder using enclosed scoop = Finished bottle (approx.)

2 fl oz 1 scoop (8.8 g) 2 fl oz

4 fl oz 2 scoops 4 fl oz

8 fl oz 4 scoops 8 fl oz

Breast milk is recommended. If you choose to use infant formula, the makers of Similac have a formula that's right for you.
